

BIB FOR HOLDING DETACHABLE INFANT TOYS

Abstract of the Disclosure

A bib (100) includes a body (105) made of flexible material, means (112) for attaching the body around an infant's neck, means (110) for attaching the body around an infant's torso, and one or more loops (120), each loop having two ends secured to the body. In one embodiment the bib includes at least one detachable infant toy (140) attached to at least one of the one or more loops.
